EXPERIENCE

Deloitte USI

Jan 2023 – Jul 2025

Software Engineer (Analyst) Fortune 500 clients: Chubb, Kroger, Atrium Health.

- Designed a production authentication architecture for enterprise modules — rotating refresh tokens, request deduplication, and a three-state client auth flow ensuring consistent session state under concurrent requests.
- Owned end-to-end frontend delivery across HR and Payroll modules for Fortune 500 clients — driving state architecture, performance optimisation, and component design on high-traffic enterprise platforms.
- Primary engineer responsible for component architecture, rollout strategy, and production delivery across global client environments.
- Owned Oracle HCM and Kronos API integrations; diagnosed and resolved 100+ production defects across enterprise payroll/HR workflows.

SalesBook

Sep 2022 – Jan 2023

Frontend Developer (Intern) B2B SaaS product team.

- Owned UI development across the customer-facing product — shipped new features and resolved 80+ UI/UX issues in React and TypeScript.
- Integrated REST APIs throughout the frontend, powering real-time data flows and dynamic product features across the application.

PROJECTS

TaskFlo — Task Management Platform

React · TypeScript · Node.js · Express · MongoDB · Docker · GitHub Actions

- Designed a production authentication system with rotating refresh tokens and request deduplication — eliminates concurrent refresh races and ensures consistent auth state; concurrent 401s queue behind a single in-flight request under load.
- Architected a compound-indexed database schema with 6 indexes and aggregated dashboard queries, eliminating N+1 patterns.

Pipeline Builder — Visual Workflow Editor

React · React Flow · Zustand · FastAPI · Python · Pydantic

node types, a shared component abstraction, and a stateless validation backend — users compose and validate directed graphs without writing any configuration. Engineered DAG cycle detection from scratch using topological sort — correctly handles disconnected graphs, isolated nodes, and cyclic pipelines without external graph libraries.

Delete Stale Git Branches — Developer Tool

Next.js · TypeScript · GitHub OAuth 2.0 · GitHub REST API

- Designed and shipped an open-source GitHub developer tool — OAuth 2.0 authentication, parallel repository scanning by commit age, safe dry-run previews before bulk deletion, and production-hardened error handling for API edge cases.

Personal Finance Dashboard — REST API

Node.js · TypeScript · Express · Prisma · PostgreSQL · Zod · Jest

- Architected a layered REST API with service-owned business logic, 5 analytics endpoints powered by parallel query execution, and input validation at every boundary — designed for correctness under concurrent load.
- Owned the full auth stack: rotating refresh tokens, server-side session revocation, and ownership-protected routes — shipped with 20+ integration tests and complete Swagger/OpenAPI documentation.

SKILLS

Programming Languages

TypeScript, JavaScript, Python, SQL, C++, HTML, CSS

Frontend

React, Next.js, Redux Toolkit, TanStack Query, Tailwind CSS, Shadcn/UI, Material UI, React Router, React Flow, Zustand

Backend

Node.js, Express, FastAPI, REST APIs, GraphQL, JWT Authentication, OAuth 2.0, Zod, Pydantic

Databases

PostgreSQL, MongoDB, Prisma ORM, Mongoose, Firebase, Supabase

Testing

Jest, Supertest, React Testing Library

DevOps & Cloud

Git, GitHub Actions, Docker, Vercel, Railway, Render, AWS (EC2, S3), Netlify

Other

Swagger/OpenAPI, WCAG 2.1, Stripe, Figma, Responsive Design

EDUCATION

SRMIST, Chennai

Bachelor of Technology in Computer Science and Engineering

2018–2022 CGPA: 8.74 / 10

ACHIEVEMENTS

- Oracle Global Human Resources Cloud 2024 Certified
- SPOT Award & Applause Award — Deloitte USI (peer-nominated, 2× in 2 years)
- LeetCode top 90th percentile (385+ problems) · GeeksForGeeks top 5% (340+) · HackRX Finalist (top 32 teams)
